Lesson 2: Room detectives

Foundation STEAM | Houses unit | 45 minutes | CRT-ready

Overview	
Focus	Rooms in a home are designed for different jobs, and the things inside each room help people do those jobs.
Curriculum	**VC2TDE2S01** how familiar products, services and environments are designed and produced by people to meet personal or local community needs. **VC2TDE2D02** explore, generate and communicate design ideas through describing, drawing or modelling (Design challenge cards).
Resources	Class set of the **Room detectives** cut-and-paste handout, scissors, glue sticks, **STEAM journals**, one set of **Design challenge cards** (last page) per table.
Links	Last lesson students sorted homes and not-homes. This lesson they go inside a home.

LISC

Learning Intention:
To learn that each room in a home is designed for a different job, and the things in each room help people do that job.

Success Criteria:
I can:

- sort things into the room where they belong.
- say what job a room does.
- tell why something belongs in that room.

Everything is ready for you

No preparation is needed. Everything is in the **labelled tub on the STEAM desk**: the handouts (one per student, plus one for you to hold up), the Design challenge cards already cut into sets, scissors and glue sticks. STEAM journals are in the class tub. Bring the class straight to the mat and start with the hook.

Lesson sequence

Time	What to do
0 to 5 min **Hook (CIC)**	**Which room am I in?** Tell students you are going to act something out and they have to guess which room of the house you are in. Mime each one slowly with no words: **brushing your teeth** (bathroom), **stirring a pot and tasting it** (kitchen), **yawning, fluffing a pillow and pulling up a blanket** (bedroom). After each guess, ask: *"How did you know?"* Then choose 2 or 3 students to mime one for the class.
5 to 15 min **Talk about the pictures**	Remind students: *"Last week we found out every home keeps people safe, dry and comfy. Today we are going inside a home."* Hold up the handout and point to each picture. Students call out which room it belongs in. Ask one quick question per picture, for example *"What job does this do?"* or *"Why would we keep this in the kitchen and not the bedroom?"* Then ask a tricky one with no picture: *"Remember the tent and the caravan? They only have one or two rooms. Where do people cook, sleep and wash?"* Let partners talk, then share. Finish with the big idea, said together: **"Every room has a job."**
15 to 20 min **Model the journal**	Show students how to set up their STEAM journal: open to a new double page and glue the 3 room labels **down the left side**, one at the top, one in the middle and one at the bottom. The pictures will go in a row next to their room. Model cutting out one picture, deciding which room it belongs in, and gluing it next to that label. While you model, choose one helper per table to put out scissors, glue sticks, journals and a set of Design challenge cards (face down).
20 to 38 min **Cut, sort, stick**	At tables, students write their name in their journal, then cut out the 3 labels and all 12 pictures. They **sort the pictures on the table first**, then glue them into their journal next to the correct room. Walk around and ask each student: *"What is this used for? Why does it belong in this room?"* **Early finishers:** choose a Design challenge card. Read it to them, then they draw the room on the next journal page and tell you about the things they put in it. Write a label for them if needed.
38 to 45 min **Share and reflect**	Choose 3 or 4 students to show their journal and explain why one thing belongs in its room. Read the Success Criteria aloud and students show a thumb (up, sideways or down) for each one. Pack away scissors and glue, and collect journals.

The handout

One A4 sheet per student with 3 room labels and 12 photos of things from around a home. The photos show each object on its own, so students have to think about where it belongs rather than spotting the room in the background.

Room	Pictures
Kitchen	Fridge, stove with oven, kettle, toaster
Bedroom	Bed, wardrobe, folded pyjamas, bedside lamp
Bathroom	Toilet, bathtub, toothbrush and toothpaste, shower

Questions to ask

- What job does this room do?
- What would happen if the fridge was in the bedroom?
- Why is the toilet in its own room with a door?
- Which room do you like best at home? What do you do there?
- If you could add a new room to your home, what job would it do?

What to look for

Success criterion	Evidence of learning
Sorts things into rooms	All 12 pictures glued next to the correct room label in the STEAM journal.
Says what job a room does	Uses words like cook, eat, sleep, wash, get dressed when talking about a room.
Tells why something belongs	Links the object to the job, for example "The kettle goes in the kitchen because it makes hot water for cooking."

Design challenge cards

These are for students who finish the sort early and are ready to think like designers. Read the card aloud. A strong response is a room with things in it that match the person's needs.

Card	A room for...	Look for things like
Baby	A new baby	A cot, a change table, soft toys, a night light
Pet	A pet dog	A dog bed, food and water bowls, toys, a little door to get outside
Wheelchair	Someone who uses a wheelchair	A wide door, a ramp, a low bed, shelves and benches they can reach

Support and extension

Level	Idea
Support	Pre-cut the pictures for students who find cutting hard. Give the sentence starter: *"This goes in the ___ because ___."*
Extension	Design challenge cards (see above). Students who finish a card can choose a second one.

Notes for the CRT

Sort before you stick. Remind students to lay every picture on the table next to the right label before any glue comes out. **A dot, not a lot** of glue on the back of each picture. If time is short, skip the tent and caravan question. Please leave the **STEAM journals** in the class tub on the STEAM desk. A short note about how the class went is always appreciated.

Design challenge: Baby

Design a bedroom for a new baby. Draw it in your journal. What does the baby need in their room?

Design challenge: Pet

Design a room for a pet dog. Draw it in your journal. What does the dog need to be happy?

Design challenge: Wheelchair

Design a bedroom for someone who uses a wheelchair. Draw it in your journal. How will they get in and reach their things?
